

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1. (Previously Presented) An overflow system for a bathtub which has a bottom, and adjacent side and endwalls, a drain port in the bottom, and an overflow port in one of the endwalls, comprising:

a drain pipe adapted to be in communication with said drain port and said overflow port,

said drain pipe having an inverted L-shape, including a horizontal leg extending into and through the overflow port of the bathtub, and a vertical leg extending downwardly for connection to a fluid drain system,

threads on the horizontal leg extending through the overflow port, and

a cap threadably mounted on an end of the horizontal leg extending through the overflow port,

the cap having an opening in its circular planar end, with a thin flexible sealing membrane secure to the cap and extending over the opening in the circular planar end.

Claim 2. (Currently Amended) A plumbing test system comprising;
a an overflow pipe having a first exposed end and second end in communication with a fluid source, wherein the first end comprises a an externally threaded portion;

~~a cap assembly threadably mounted on the first end and wherein a portion of the cap assembly is composed of a material~~

~~capable of sealing the first end when the cap is threaded onto the first end;~~
the a cap assembly containsing having a cap having with an
opening in a planar end, with and a sealing member secured
to the cap and extending over the opening in the planar
end; and
the cap threadably mounted on the externally threaded portion of
the first end and wherein the sealing material is composed
of a material capable of sealing the first end when the cap
is threaded onto the first end.

Claim 3. (Canceled)

Claim 4. (New) A temporary closure device for a bathtub with
an overflow port in an end wall of the bathtub, comprising:
an overflow pipe having external threads that extend through the
overflow port;
a cap having an outer face, an aperture at an open end, and a
body with interior threads adapted to mate with the
external threads of the overflow pipe, and
a thin sealing membrane affixed to the outer face to seal the
aperture of the cap.
